

InterLog - MVP Product Requirements Document (PRD)

Product Information

Product Name

InterLog

Product Type

AI-powered productivity timeline and reflection web application

Platform

Web Application

Tech Stack

Frontend:

- Next.js
- React
- TypeScript
- Tailwind CSS
- shadcn/ui

Backend:

- Next.js Server Actions
- Route Handlers

Database:

- PostgreSQL
- Prisma ORM

Authentication:

- Auth.js
- Google OAuth
- Email Authentication

AI:

- DeepSeek API

Hosting:

- Vercel
 - Supabase PostgreSQL
-

Product Overview

InterLog is an AI-powered interstitial journaling platform that helps users understand how they actually spend their time.

Users can quickly log activities throughout the day using natural language or a focus timer. The system automatically categorizes activities, generates visual timelines, and provides reflections and insights that help users build awareness of their habits and routines.

Unlike traditional productivity tools that focus on planning future tasks, InterLog focuses on helping users understand what already happened and learn from it.

Vision

To become the personal timeline and reflection platform that helps people understand their lives through everyday activities.

Problem Statement

Many people feel busy but cannot clearly explain where their time went.

Current solutions are fragmented:

- Notes apps for journaling
- Calendar apps for scheduling
- Time trackers for productivity
- Reflection journals for mindfulness

As a result:

- Users lose consistency
- Data is scattered

- Reflection becomes difficult
- Long-term patterns remain invisible

People need a simple system that combines activity tracking, visualization, and reflection into a single experience.

Objectives

User Objectives

- Log activities with minimal effort
- Visualize daily time usage
- Understand personal productivity patterns
- Reflect on daily experiences
- Improve awareness of habits and routines

Business Objectives

- Validate product-market fit
 - Encourage daily engagement
 - Convert guest users into registered users
 - Build retention through reflection habits
-

Target Users

Primary Users

Productivity Enthusiasts

Users who enjoy:

- Journaling
- Personal analytics
- Habit improvement
- Self-development

Students

Users who want to:

- Track study time
- Improve focus
- Review learning habits

Freelancers and Remote Workers

Users who want to:

- Understand work patterns
 - Measure focus sessions
 - Review how time is spent
-

Core Features

1. Activity Logging

Users can create activity entries manually.

Examples:

9:00 AM - 10:30 AM Working on Landing Page

2:00 PM - 3:30 PM Study JavaScript

System automatically extracts:

- Start time
 - End time
 - Duration
 - Activity title
-

2. Focus Session Timer

Users can start and stop focus sessions.

Workflow:

Start Focus

↓

Select Activity Name

↓

Timer Running

↓

Stop Timer

↓

Activity Automatically Created

3. AI Smart Categorization

Powered by DeepSeek.

The AI automatically assigns categories.

Examples:

Coding Portfolio → Work

Reading UX Book → Learning

Gym Workout → Health

Netflix → Entertainment

Coffee with Friends → Social

Users may edit categories manually.

4. Timeline View

Visual representation of daily activities.

Features:

- Chronological layout
 - Color-coded categories
 - Activity duration blocks
 - Daily timeline overview
-

5. Calendar View

Users can browse previous logs.

Views:

- Day
 - Week
 - Month
-

6. Analytics Dashboard

Displays:

- Total tracked hours
 - Focus hours
 - Category breakdown
 - Most active categories
 - Weekly activity trends
-

7. Reflection System

Reflection is a core feature of InterLog.

At the end of each day, users receive reflection prompts.

Example Prompts:

- What felt meaningful today?
- What are you proud of today?
- What drained your energy?
- What distracted you the most?
- What would you like to improve tomorrow?

Users can:

- Answer reflections
- Skip reflections
- Review historical reflections

Reflection Timeline

Reflections are linked to daily activity logs.

Users can revisit:

- Timeline
- Analytics
- Reflection answers

for the same day.

8. InterLog Wrapped

Weekly and Monthly summaries.

Examples:

- Top categories
- Total tracked hours
- Most productive day
- Longest focus session
- Reflection highlights

AI generates personalized insights.

Example:

"You spent 38% of your tracked time learning this week and completed most focus sessions during the evening."

9. Guest Mode

Users can immediately use InterLog without registration.

Guest users can:

- Create activities
- Use timer
- View timeline
- Complete reflections
- Explore analytics

Guest data is stored locally.

Limitations:

- No cloud sync
- No backup

- No cross-device access
-

10. Authentication

Google Login

One-click sign in.

Email Login

Email and password authentication.

When users create an account:

- Guest data is migrated automatically
 - Historical activities are preserved
-

Edge Cases

Overlapping Activities

Behavior:

- Warning displayed
 - User can still save
-

Missing End Time

Behavior:

- Prompt user to complete entry
 - Allow draft save
-

AI Misclassification

Behavior:

- User can manually change category
-

Guest User Clears Browser Data

Behavior:

- Local data may be lost
 - Registration prompts encourage backup
-

Security & Compliance

Authentication

- Secure cookies
- JWT sessions

Data Security

- Encrypted storage
- Row-level authorization

Compliance

- User data export
- User data deletion
- GDPR-ready architecture

API Security

- Rate limiting
- Input validation
- CSRF protection

Market Analysis

Existing Alternatives

- Toggl
- Clockify
- RescueTime
- Day One
- Reflect
- Notion Templates

Market Gap

Most products focus on:

- Planning
- Tracking
- Journaling

InterLog combines:

- Activity Logging
- Timeline Visualization
- Reflection
- AI Insights

into a single workflow.

SWOT Analysis

Strengths

- Unique positioning
- Reflection-driven experience
- AI-powered categorization
- Low friction onboarding

Weaknesses

- Requires consistent usage
- New user behavior to build

Opportunities

- Growing productivity market
- AI self-improvement trend
- Creator and student audiences

Threats

- Established productivity tools
 - Large AI platforms entering the space
 - User retention challenges
-

Success Metrics

Acquisition

Guest-to-user conversion rate

Target:
20%+

Engagement

Average daily entries

Target:
5+ entries per user

Reflection completion rate

Target:
50%+

Retention

Day 7 Retention

Target:
30%+

Day 30 Retention

Target:
20%+

Product Value

Weekly Summary Views

Target:
60%+ active users

Reflection Usage

Target:
50%+ active users complete reflections at least 3 times per week.
